React + Python full-stack engineer

Description
Experience: 2 to 5 years

Location: Mahape, Navi Mumbai

Job Mode: Work from office 5 days and can join Immediately

Role & Responsibilities:

- Manage CI/CD pipelines using tools like Jenkins, GitLab CI, or GitHub Actions.
- Automate infrastructure using Terraform, Ansible, or CloudFormation.
- Monitor applications and infrastructure using tools like Prometheus, Grafana, ELK stack, or equivalent.
- Manage cloud infrastructure (AWS/Azure/GCP) including provisioning, deployment, and scaling.
- Maintain system reliability, availability, and performance.
- Work closely with development teams to ensure smooth integration and deployment.
- Maintain version control and branching strategies in Git.
- Develop and maintain scalable web applications using React for the frontend and Python (FastAPI/Flask) for the backend.
- Collaborate with UI/UX designers to implement responsive and user-friendly interfaces.
- Integrate RESTful APIs and ensure seamless communication between frontend and backend services.
- Write clean, maintainable, and efficient code following best practices.
- Participate in code reviews, debugging, and troubleshooting across the stack.
- Work closely with cross-functional teams to gather requirements and deliver features on schedule.
- Optimize applications for maximum speed, scalability, and security.
- Contribute to the continuous improvement of development workflows and tools.

Key Skills Required:

- Frontend: React (with Redux or NextJS API for state management, modern frontend build tools).
- Backend: Python (FastAPI or Flask or Similar).
- API Communication: RESTful APIs for integration between React and Python services.
- Automation & Scripting: Python scripting for deployment and automation tasks.
- Package Management: npm, pip (for managing frontend and backend dependencies).
- Testing: End-to-end testing tools for React and Python stacks.
